NAME

      curl_formparse - add a section to a multipart/formdata HTTP POST: deprecated (use curl_formadd instead)

SYNOPSIS

      #include <curl/curl.h>

      CURLcode curl_formparse(char * *string,* **struct HttpPost **** *firstitem,* **struct HttpPost **** *lastitem***);**

DESCRIPTION

      This has been removed deliberately. The **curl_formadd** has been introduced to replace this function. Do not use this. Convert to the new function now. curl_formparse() will be removed from a future version of libcurl.
