NAME

curl_formfree - free a previously build multipart/formdata HTTP POST chain

SYNOPSIS

#include <curl/curl.h>

void curl_formfree(struct HttpPost * *form);*

DESCRIPTION

curl_formfree() is used to clean up data previously built/appended with curl_formadd()/curl_formparse(). This must be called when the data has been used, which typically means after the curl_easy_perform() has been called.

RETURN VALUE

None

SEE ALSO

curl_formparse(3) [deprecated], **curl_formadd**(3)

BUGS

libcurl 7.7.1 and earlier versions does not allow a NULL pointer to be used as argument.
