FreeBSD Glossary

This glossary contains terms and acronyms used within the FreeBSD community and documentation.

A

ACL	參見 Access Control List .
ACPI	參見 Advanced Configuration and Power Interface .
AMD	參見 Automatic Mount Daemon .
AML	參見 ACPI Machine Language .
API	參見 Application Programming Interface .
APIC	參見 Advanced Programmable Interrupt Controller .
APM	參見 Advanced Power Management .
APOP	參見 Authenticated Post Office Protocol .
ASL	參見 ACPI Source Language .
ATA	參見 Advanced Technology Attachment .
ATM	參見 Asynchronous Transfer Mode .
ACPI Machine Language	Pseudocode, interpreted by a virtual machine within an ACPI-compliant operating system, providing a layer between the underlying hardware and the documented interface presented to the OS.
ACPI Source Language	The programming language AML is written in.
Access Control List	
Advanced Configuration and Power Interface	A specification which provides an abstraction of the interface the hardware presents to the operating system, so that the operating system should need to know nothing about the underlying

hardware to make the most of it. ACPI evolves and supercedes the functionality provided previously by APM, PNPBIOS and other technologies, and provides facilities for controlling power consumption, machine suspension, device enabling and disabling, etc.

Application Programming
Interface

A set of procedures, protocols and tools that specify the canonical interaction of one or more program parts; how, when and why they do work together, and what data they share or operate on.

Advanced Power Management

Advanced Programmable
Interrupt Controller

Advanced Technology
Attachment

Asynchronous Transfer Mode

Authenticated Post Office
Protocol

Automatic Mount Daemon

A daemon that automatically mounts a filesystem when a file or directory within that filesystem is accessed.

B

BIND

参見 [Berkeley Internet Name Domain](#).

BIOS

参見 [Basic Input/Output System](#).

BSD

参見 [Berkeley Software Distribution](#).

Basic Input/Output System

The definition of BIOS depends a bit on the context. Some people refer to it as the ROM chip with a basic set of routines to provide an interface between software and hardware. Others refer to it as the set of routines contained in the chip that help in bootstrapping the system. Some might also refer to it as the screen used to configure the bootstrapping process. The BIOS is PC-

			specific but other systems have something similar.
Berkeley Domain	Internet Name		An implementation of the DNS protocols.
Berkeley Distribution	Software		這是由 U.C. Berkeley 的 Computer Systems Research Group(CSRG) 選來當作他們所改良、修改過的 AT&T's 32V UNIX® 名稱。FreeBSD 則是由 CSRG 的這個心血衍生出來。
Bikeshed Building			A phenomenon whereby many people will give an opinion on an uncomplicated topic, whilst a complex topic receives little or no discussion. See the FAQ for the origin of the term.

C

CD			參見 Carrier Detect .
CHAP			參見 Challenge Handshake Authentication Protocol .
CLIP			參見 Classical IP over ATM .
COFF			參見 Common Object File Format .
CPU			參見 Central Processing Unit .
CTS			參見 Clear To Send .
CVS			參見 Concurrent Versions System .
Carrier Detect			An RS232C signal indicating that a carrier has been detected.
Central Processing Unit			Also known as the processor. This is the brain of the computer where all calculations take place. There are a number of different architectures with different instruction sets. Among the more well-known are the Intel-x86 and derivatives, Sun SPARC, PowerPC, and Alpha.
Challenge Authentication Protocol	Handshake		
Classical IP over ATM			

Clear To Send An RS232C signal giving the remote system permission to send data.

Common Object File Format

Concurrent Versions System

D

DAC 參見 [Discretionary Access Control](#).

DDB 參見 [Debugger](#).

DES 參見 [Data Encryption Standard](#).

DHCP 參見 [Dynamic Host Configuration Protocol](#).

DNS 參見 [Domain Name System](#).

DSDT 參見 [Differentiated System Description Table](#).

DSR 參見 [Data Set Ready](#).

DTR 參見 [Data Terminal Ready](#).

DVMRP 參見 [Distance-Vector Multicast Routing Protocol](#).

Discretionary Access
Control

Data Encryption Standard

Data Set Ready

Data Terminal Ready

Debugger

Differentiated System
Description Table

Distance-Vector Multicast
Routing Protocol

Domain Name System The system that converts humanly readable hostnames (i.e., mail.example.net) to Internet addresses and vice versa.

Dynamic Host Configuration Protocol A protocol that dynamically assigns IP addresses to a computer (host) when it requests one from the server. The address assignment is called a “lease”.

E

ECOFF 参見 [Extended COFF](#).

ELF 参見 [Executable and Linking Format](#).

ESP 参見 [Encapsulated Security Payload](#).

Encapsulated Security
Payload

Executable and Linking
Format

Extended COFF

F

FADT 参見 [Fixed ACPI Description Table](#).

FAT 参見 [File Allocation Table](#).

FAT16 参見 [File Allocation Table \(16-bit\)](#).

FTP 参見 [File Transfer Protocol](#).

File Allocation Table

File Allocation Table (16-
bit)

File Transfer Protocol A member of the family of high-level protocols implemented on top of TCP which can be used to transfer files over a TCP/IP network.

Fixed ACPI Description
Table

G

GUI 参見 [Graphical User Interface](#).

Giant The name of a mutual exclusion mechanism (a **sleep mutex**) that protects a large set of kernel resources. Although a simple locking mechanism was adequate in the days where a machine might have only a few dozen processes, one networking card, and certainly only one processor, in current times it is an unacceptable performance bottleneck. FreeBSD developers are actively working to replace it with locks that protect individual resources, which will allow a much greater degree of parallelism for both single-processor and multi-processor machines.

Graphical User Interface A system where the user and computer interact with graphics.

H

HTML 参見 [HyperText Markup Language](#).

HUP 参見 [HangUp](#).

HangUp

HyperText Markup Language The markup language used to create web pages.

I

I/O 参見 [Input/Output](#).

IASL 参見 [Intel' s ASL compiler](#).

IMAP 参見 [Internet Message Access Protocol](#).

IP 参見 [Internet Protocol](#).

IPFW 参見 [IP Firewall](#).

IPP 参見 [Internet Printing Protocol](#).

IPv4 参見 [IP Version 4](#).

IPv6 参見 [IP Version 6](#).

1978

ISP	参見 Internet Service Provider .
IP Firewall	
IP Version 4	The IP protocol version 4, which uses 32 bits for addressing. This version is still the most widely used, but it is slowly being replaced with IPv6. 另参見 IP Version 6 .
IP Version 6	The new IP protocol. Invented because the address space in IPv4 is running out. Uses 128 bits for addressing.
Input/Output	
Intel' s ASL compiler	Intel' s compiler for converting ASL into AML.
Internet Message Access Protocol	
Internet Printing Protocol	
Internet Protocol	The packet transmitting protocol that is the basic protocol on the Internet. Originally developed at the U.S. Department of Defense and an extremely important part of the TCP/IP stack. Without the Internet Protocol, the Internet would not have become what it is today. For more information, see RFC 791 .
Internet Service Provider	A company that provides access to the Internet.

K

KAME	Japanese for “turtle”, the term KAME is used in computing circles to refer to the KAME Project , who work on an implementation of IPv6.
KDC	参見 Key Distribution Center .
KLD	参見 Kernel ld(1) .
KSE	参見 Kernel Scheduler Entities .

KVA	參見 Kernel Virtual Address .
Kbps	參見 Kilo Bits Per Second .
Kernel <code>ld(1)</code>	
Kernel Scheduler Entities	A kernel-supported threading system. See the project home page for further details.
Kernel Virtual Address	
Key Distribution Center	
Kilo Bits Per Second	Used to measure bandwidth (how much data can pass a given point at a specified amount of time). Alternates to the Kilo prefix include Mega, Giga, Tera, and so forth.

L

LAN	參見 Local Area Network .
LOR	參見 Lock Order Reversal .
LPD	參見 Line Printer Daemon .
Line Printer Daemon	
Local Area Network	A network used on a local area, e.g. office, home, or so forth.
Lock Order Reversal	<p>The FreeBSD kernel uses a number of resource locks to arbitrate contention for those resources. A run-time lock diagnostic system found in FreeBSD-CURRENT kernels (but removed for releases), called witness(4), detects the potential for deadlocks due to locking errors. (witness(4) is actually slightly conservative, so it is possible to get false positives.) A true positive report indicates that “if you were unlucky, a deadlock would have happened here”.</p> <p>True positive LORs tend to get fixed quickly, so check http://lists.FreeBSD.org/mailman/listinfo/freebsd-current and the LORs Seen page before posting to the mailing lists.</p>

M

MAC	參見 Mandatory Access Control .
MADT	參見 Multiple APIC Description Table .
MFC	參見 Merge From Current .
MFP4	參見 Merge From Perforce .
MFS	參見 Merge From Stable .
MIT	參見 Massachusetts Institute of Technology .
MLS	參見 Multi-Level Security .
MOTD	參見 Message Of The Day .
MTA	參見 Mail Transfer Agent .
MUA	參見 Mail User Agent .
Mail Transfer Agent	An application used to transfer email. An MTA has traditionally been part of the BSD base system. Today Sendmail is included in the base system, but there are many other MTAs, such as postfix, qmail and Exim.
Mail User Agent	An application used by users to display and write email.
Mandatory Access Control	
Massachusetts Institute of Technology	
Merge From Current	MFC 是一個縮寫，它代表了 “Merged From -CURRENT”，這字眼會在 CVS logs 中常見，以表示這是從 -CURRENT 中整合進其他分支(通常是 -STABLE)的 patch 或功能。
Merge From Perforce	To merge functionality or a patch from the Perforce repository to the -CURRENT branch. 另參見 Perforce .
Merge From Stable	In the normal course of FreeBSD development, a change will be committed to the -CURRENT branch for testing before being merged to -STABLE. On rare occasions,

a change will go into -STABLE first and then be merged to -CURRENT.

This term is also used when a patch is merged from -STABLE to a security branch.
另參見 [Merge From Current](#).

Message Of The Day

A message, usually shown on login, often used to distribute information to users of the system.

Multi-Level Security

Multiple APIC Description
Table

N

NAT

參見 [Network Address Translation](#).

NDISulator

參見 [Project Evil](#).

NFS

參見 [Network File System](#).

NTFS

參見 [New Technology File System](#).

NTP

參見 [Network Time Protocol](#).

Network Address Translation

Network File System

New Technology File System

A filesystem developed by Microsoft and available in its “New Technology” operating systems, such as Windows®2000, Windows®NT® and Windows®XP.

Network Time Protocol

O

OBE

參見 [Overtaken By Events](#).

ODMR

參見 [On-Demand Mail Relay](#).

OS

參見 [Operating System](#).

On-Demand Mail Relay

1982

Operating System	A set of programs, libraries and tools that provide access to the hardware resources of a computer. Operating systems range today from simplistic designs that support only one program running at a time, accessing only one device to fully multi-user, multi-tasking and multi-process systems that can serve thousands of users simultaneously, each of them running dozens of different applications.
Overtaken By Events	Indicates a suggested change (such as a Problem Report or a feature request) which is no longer relevant or applicable due to such things as later changes to FreeBSD, changes in networking standards, the affected hardware having since become obsolete, and so forth.

P

p4	参見 Perforce .
PAE	参見 Physical Address Extensions .
PAM	参見 Pluggable Authentication Modules .
PAP	参見 Password Authentication Protocol .
PC	参見 Personal Computer .
PCNSFD	参見 Personal Computer Network File System Daemon .
PDF	参見 Portable Document Format .
PID	参見 Process ID .
POLA	参見 Principle Of Least Astonishment .
POP	参見 Post Office Protocol .
POP3	参見 Post Office Protocol Version 3 .
PPD	参見 PostScript Printer Description .
PPP	参見 Point-to-Point Protocol .
PPPoA	参見 PPP over ATM .

PPPoE	参見 PPP over Ethernet .
PPP over ATM	
PPP over Ethernet	
PR	参見 Problem Report .
PXE	参見 Preboot eXecution Environment .
Password Authentication Protocol	
Perforce	<p>A source code control product made by Perforce Software which is more advanced than CVS. Although not open source, it use is free of charge to open-source projects such as FreeBSD.</p> <p>Some FreeBSD developers use a Perforce repository as a staging area for code that is considered too experimental for the - CURRENT branch.</p>
Personal Computer	
Personal Computer Network File System Daemon	
Physical Address Extensions	A method of enabling access to up to 64 GB of RAM on systems which only physically have a 32-bit wide address space (and would therefore be limited to 4 GB without PAE).
Pluggable Authentication Modules	
Point-to-Point Protocol	
Pointy Hat	A mythical piece of headgear, much like a dunce cap , awarded to any FreeBSD committer who breaks the build, makes revision numbers go backwards, or creates any other kind of havoc in the source base. Any committer worth his or her salt will soon accumulate a large collection. The usage is (almost always?) humorous.
Portable Document Format	
1984	

Post Office Protocol

Post Office Protocol
Version 3

PostScript Printer
Description

Preboot eXecution
Environment

Principle Of Least Astonishment

在 FreeBSD 的發展過程中，任何的改變幅度，都不該讓使用者習慣感到不適。舉例來說：若任意調動 `/etc/defaults/rc.conf` 中的系統啟動順序，就是違背 POLA 原則的精神。任何開發人員，都該在做出重大改變前，先三思是否會與 POLA 原則有所違背。

Problem Report

A description of some kind of problem that has been found in either the FreeBSD source or documentation. See [Writing FreeBSD Problem Reports](#).

Process ID

A number, unique to a particular process on a system, which identifies it and allows actions to be taken against it.

Project Evil

The working title for the NDISulator, written by Bill Paul, who named it referring to how awful it is (from a philosophical standpoint) to need to have something like this in the first place. The NDISulator is a special compatibility module to allow Microsoft Windows# NDIS miniport network drivers to be used with FreeBSD/i386. This is usually the only way to use cards where the driver is closed-source. See `src/sys/compat/ndis/subr_ndis.c`.

R

RA 參見 [Router Advertisement](#).

RAID 參見 [Redundant Array of Inexpensive Disks](#).

RAM 參見 [Random Access Memory](#).

RD 參見 [Received Data](#).

RFC	參見 Request For Comments .
RISC	參見 Reduced Instruction Set Computer .
RPC	參見 Remote Procedure Call .
RS232C	參見 Recommended Standard 232C .
RTS	參見 Request To Send .
Random Access Memory	
Received Data	
Recommended Standard 232C	A standard for communications between serial devices.
Reduced Instruction Set Computer	
Redundant Array of Inexpensive Disks	
Remote Procedure Call	
repocopy	參見 Repository Copy .
Repository Copy	<p>repocopy(“repository copy” 的縮寫) 就是直接從 CVS repository 中複製檔案。</p> <p>若不用 repocopy 的方式，那麼若要在 repository 內複製、移動檔案的話，committer 就必須執行 <code>cvs add</code> 來把檔案放到新位置，並且還要執行 <code>cvs rm</code> 來刪除舊檔。</p> <p>剛剛講的這種方式的缺點在於，該檔的之前相關紀錄（比如在 CVS logs 中的相關項目）並不會隨之而複製到新地方去。而 FreeBSD 計劃中認為這些歷史記錄都是相當有用的，所以會經常採用 repository copy 的方式。這也就是為何 repository 管理員會直接在 repository 內複製檔案的方式，而非採取 <code>cvs(1)</code> 程式來進行 <code>cvs add</code>、<code>cvs rm</code> 之類的動作。</p>
Request For Comments	<p>A set of documents defining Internet standards, protocols, and so forth. See www.rfc-editor.org.</p> <p>Also used as a general term when someone has a suggested change and wants feedback.</p>

TCP/IP	參見 Transmission Control Protocol/Internet Protocol .
TD	參見 Transmitted Data .
TFTP	參見 Trivial FTP .
TGT	參見 Ticket-Granting Ticket .
TSC	參見 Time Stamp Counter .
Ticket-Granting Ticket	
Time Stamp Counter	A profiling counter internal to modern Pentium® processors that counts core frequency clock ticks.
Transmission Control Protocol	A protocol that sits on top of (e.g.) the IP protocol and guarantees that packets are delivered in a reliable, ordered, fashion.
Transmission Control Protocol/Internet Protocol	The term for the combination of the TCP protocol running over the IP protocol. Much of the Internet runs over TCP/IP.
Transmitted Data	
Trivial FTP	

U

UDP	參見 User Datagram Protocol .
UFS1	參見 Unix File System Version 1 .
UFS2	參見 Unix File System Version 2 .
UID	參見 User ID .
URL	參見 Uniform Resource Locator .
USB	參見 Universal Serial Bus .
Uniform Resource Locator	
Unix File System Version 1	
Unix File System Version 2	
Universal Serial Bus	

User ID

A unique number assigned to each user of a computer, by which the resources and permissions assigned to that user can be identified.

User Datagram Protocol

V

VPN

参見 [Virtual Private Network](#).

Virtual Private Network

版本記錄

This book is the combined work of hundreds of contributors to “The FreeBSD Documentation Project”. The text is authored in SGML according to the DocBook DTD and is formatted from SGML into many different presentation formats using Jade, an open source DSSSL engine. Norm Walsh's DSSSL stylesheets were used with an additional customization layer to provide the presentation instructions for Jade. The printed version of this document would not be possible without Donald Knuth's TeX typesetting language, Leslie Lamport's LaTeX, or Sebastian Rahtz's JadeTeX macro package.
